

31-August-2024

TO WHOM IT MAY CONCERN

I am writing to highly recommend Shmulik Kainan, who worked for General Electric Power as Environment, Health and Safety manager on Orot Rabin Combined Cycle New Unit Project from 21-August-2022 to 31-August-2024 at Hadera, Israel. I have had the pleasure of working closely with him, and I can confidently vouch for his exceptional abilities and character.

In his role as EHS Manager at GE, Shmulik has consistently demonstrated an exceptional commitment to maintaining and enhancing our health and safety standards on site. He has played a pivotal role in ensuring compliance with local Israeli regulations and industry best practices, effectively minimizing risk and safeguarding our team.

Shmulik possesses a comprehensive understanding of construction safety protocols and has developed a proactive approach to identifying and mitigating potential hazards. He worked closely with site contractors to ensure that risks assessments and methods of statement were prepared properly before starting the work and then supervised closely the activities, leading to an increase in awareness and adherence to safety procedures.

In addition to his technical expertise, Shmulik is an outstanding communicator and leader. He has a unique talent for engaging with staff at all levels, fostering a culture of safety and collaboration. Shmulik's ability to address safety concerns promptly and effectively, combined with his approachable demeanor, makes him an invaluable asset to any team.

I am confident that Shmulik Kainan will bring the same level of dedication, expertise, and positive impact to any team or organization as he has demonstrated at General Electric.

If you require any further information or wish to discuss Shmulik's qualifications in more detail, please do not hesitate to contact me.

Sincerely,

Abraham Sanchez

Site Manager, Orot Rabin
